MasterCard Automatic Billing Updater (ABU) Service

**What this means to you:**

Beginning October 31, 2017, MasterCard's ABU service will update the consumer's MasterCard debit card information with participating merchants to process recurring cardholder payments. The ABU service is designed to prevent debit card transactions from declines due to outdated information at the merchant level, which may lead to cardholder frustration and dissatisfaction. Mastercard's ABU service will help prevent automatic payments from being declined due to a change in the card expiration date.
